Mar. 10, 1995

Dear Sir:

Enclosed is the event data of Rocky Mountain Front project in 1992. Total 446 events with 4.01 GB are written into 4 separate low density exabyte tapes and all information related to the data is stored in another tape. The event files are compressed tared sac-format files. Below are the tape descriptions:

tape 1: info, include log, event list, station location, etc
tape 2: 9205-9206 , 1077 MB
tape 3: 9207, 1194 MB
tape 4: 9208, 817 MB
tape 5: 9209-9212, 143 MB

The elevation for 7 stations left with "unknown". We will visit the field notes from other PIs and get the correct version measured in the field. Once we get them, we will send them to you as soon as possible.

If you have any problems, please feel free to contact us.

Sincerely yours,

Art Lerner-Lam
