INTRODUCTION

Over an eight year period from 1978-1985, the U.S. Geological Survey conducted seismic refraction surveys in northeastern California to study the crustal structure and to assess the geothermal potential of the region (Figures 1, 2, and 3). Figure 1 shows all shotpoints labeled with the shotpoint location number. Figure 2 shows all shotpoint and recorder locations. Figure 3 shows shotpoints and station locations for each deployment of instruments. The data are grouped together according to instrument deployments, and analysis of data from different deployments has been done separately by different researchers. Interpretation of deployments 2-8 (Figures 3b-3h) is presented by Zucca and others (1986) and Fuis and others (1987). Interpretation of deployments 11, 13, and 15 (Figures 3k, 3m, and 3o) in the Lassen Peak area are reported in Berge and Stauber (in press), and a report on the 1985 data collected at Medicine Lake volcano (Deployment 16, Figure 3p) is given in Berge and others (1986). The purpose of this report is to present the complete data set in tables, figures, and on digital tapes.

FIELD OPERATIONS AND INSTRUMENTATION

A total of 55 shots were detonated at 29 shotpoints during the surveys (Table 1, Figure 1). At each shotpoint, approximately 900 or more kg of explosives was loaded and detonated in 50 m deep boreholes. In the figures and tables, the first two digits of the shotpoint numbers indicate the year the shotpoint was first used. Each shot that was detonated has a distinct shot number referring to the sequence in which the shots were detonated.

The instruments are portable cassette (analog) tape recorders with 2-Hz seismometers, capable of rapid deployment, programmable turn-on, and rapid playback in the field or laboratory. A total of 60 recorders were used for deployment 1, 100 recorders were used for deployments 2-15 and 120 recorders were used for deployment 16. The recorders were deployed a total of 16 times with an approximate spacing of 0.5-1.75 km, and one or more shots were recorded during each deployment (Figures 2, 3; Tables 2, 3). The recorder locations were numbered independently each year, which resulted in duplicated location numbers from year to year. For deployment 2, all recorders were deployed near the shotpoint in order to test the recording and playback equipment ("huddle test").

DATA PROCESSING

The analog seismic signals recorded on the cassette tapes were digitized beginning at time

$$T = S + T_0 + X/(6.0 \text{ km/s}) + c,$$

where S is the shot time (Table 1), T_0 is the reduced start time in seconds, X is the shot-to-recorder distance in kilometers, and c is the recorder clock drift in seconds. The appropriate digitizing parameters for each year of recording is given below:

Year	Sampling Interval (msec)	Record length (Samples)	T_0 (s)
1978	5	2001	-2
1981	5	4001	-2
1982	5	4001	-2
1985	5	4001	-4

The shot-to-station distances and azimuths (Table 3) were calculated using the Richter approximation for distances up to 80 kilometers. At distances greater than 80 kilometers, distances were calculated using a spherical Earth approximation which yields results differing by about 0.2 kilometers from the Richter approximation results.

Approximate ground velocity can be calculated from the digital amplitude, recorder attenuation (trace header, bytes 121-122, see below), and a formula in Berge and others (1986, Appendix B). The digital sample values vary from zero to 4095 counts.

ARCHIVE DATA TAPES

Data for this experiment is stored on three 9-track, 1/2 inch digital tapes, recorded at 1600 bits per inch. Tapes 1 and 2 contain the digitized waveform data written in SEGY format (Barry and others, 1975) (Table 4). The SEGY reel identification card image block (Table 5), contains informational text describing the tape and its contents. Only certain byte fields are used in the reel identification binary-coded block (Table 6). Some of the trace identification headers on the SEGY tapes have a different definition than is specified in the SEGY standard (Table 7). The number of samples per trace specified in the reel identification header binary-coded block is the maximum trace length in that reel. The data trace length varies within each tape reel.

The third tape contains tables 1-7 stored as one file, in unlabelled ASCII format. The physical blocksize is 2640 bytes, and each logical record ("card image") is padded to 132 bytes. A double end-of-file mark is written after the data file to signify the end of tape.

All tapes can be obtained from the following source:

ACKNOWLEDGMENTS

This report includes the work of a large number of people including the authors. E.E. Criley coordinated all field operations. P.A. Berge, P.B. Dawson, C.A. Finn, G.S. Fuis, R. Harris, W.M. Kohler, and M.H. Smith sited and located stations. P.A. Berge, J.M. Bonomolo, J.E. Boyer, L. Branson, M. Breitbart, J.M. Coakley, R.H. Colburn, C.S. Cooper, P.B. Dawson, J.R. Evans, S.K. Gallanthine, C. Gilbert, K.E. Harrington, L.R. Hoffman, L. Hollis, J. Holubar, P. Johnson, W.M. Kohler, J. Lupac, N. MacGregor-Scott, W.L. McQuary, P.J. Meador, G. Mendoza, J.M. Murphy, G. Nishioka, A. Parker, R. Ramirez, J.N. Roloff, M.H. Smith, V.D. Sutton, A.W. Walter, D. Whitman, J. Wilson, and M. Zimmerman deployed the instruments. R.M. Kaderabek and Robert McClearn maintained the instruments in the field. P.A. Berge, M. Breitbart, J.M. Coakley, C.J. Criley, E.E. Criley, Bruce Echols, E. Endo, C. Gilbert, R.M. Kaderabek, D. Knapp, R.P. Myer, Jr., G.A. Molina, D. Renault, M.H. Smith, and J. Wilson assisted with the drilling, loading shot holes, and shooting. L.M. Baker contributed computer expertise. C.A. Finn helped in the field. Sheryl Johnson, Donna Barton, Robin Rebello, and Marty Sanders provided assistance in the office. A number of persons with the U.S. Forest Service expedited the permitting process, including Glenn Bradley, Gene Grossman, Tom Farmer, and John Nelson. We are also indebted to numerous land owners and managers who permitted us access to their land, including Nathan Hammond, Richard MacBeth, and N.M. Beaty and Associates. We also wish to thank True and Burton Hoyle for allowing the USGS to use their cabin at Medicine Lake as our headquarters during portions of the experiment.

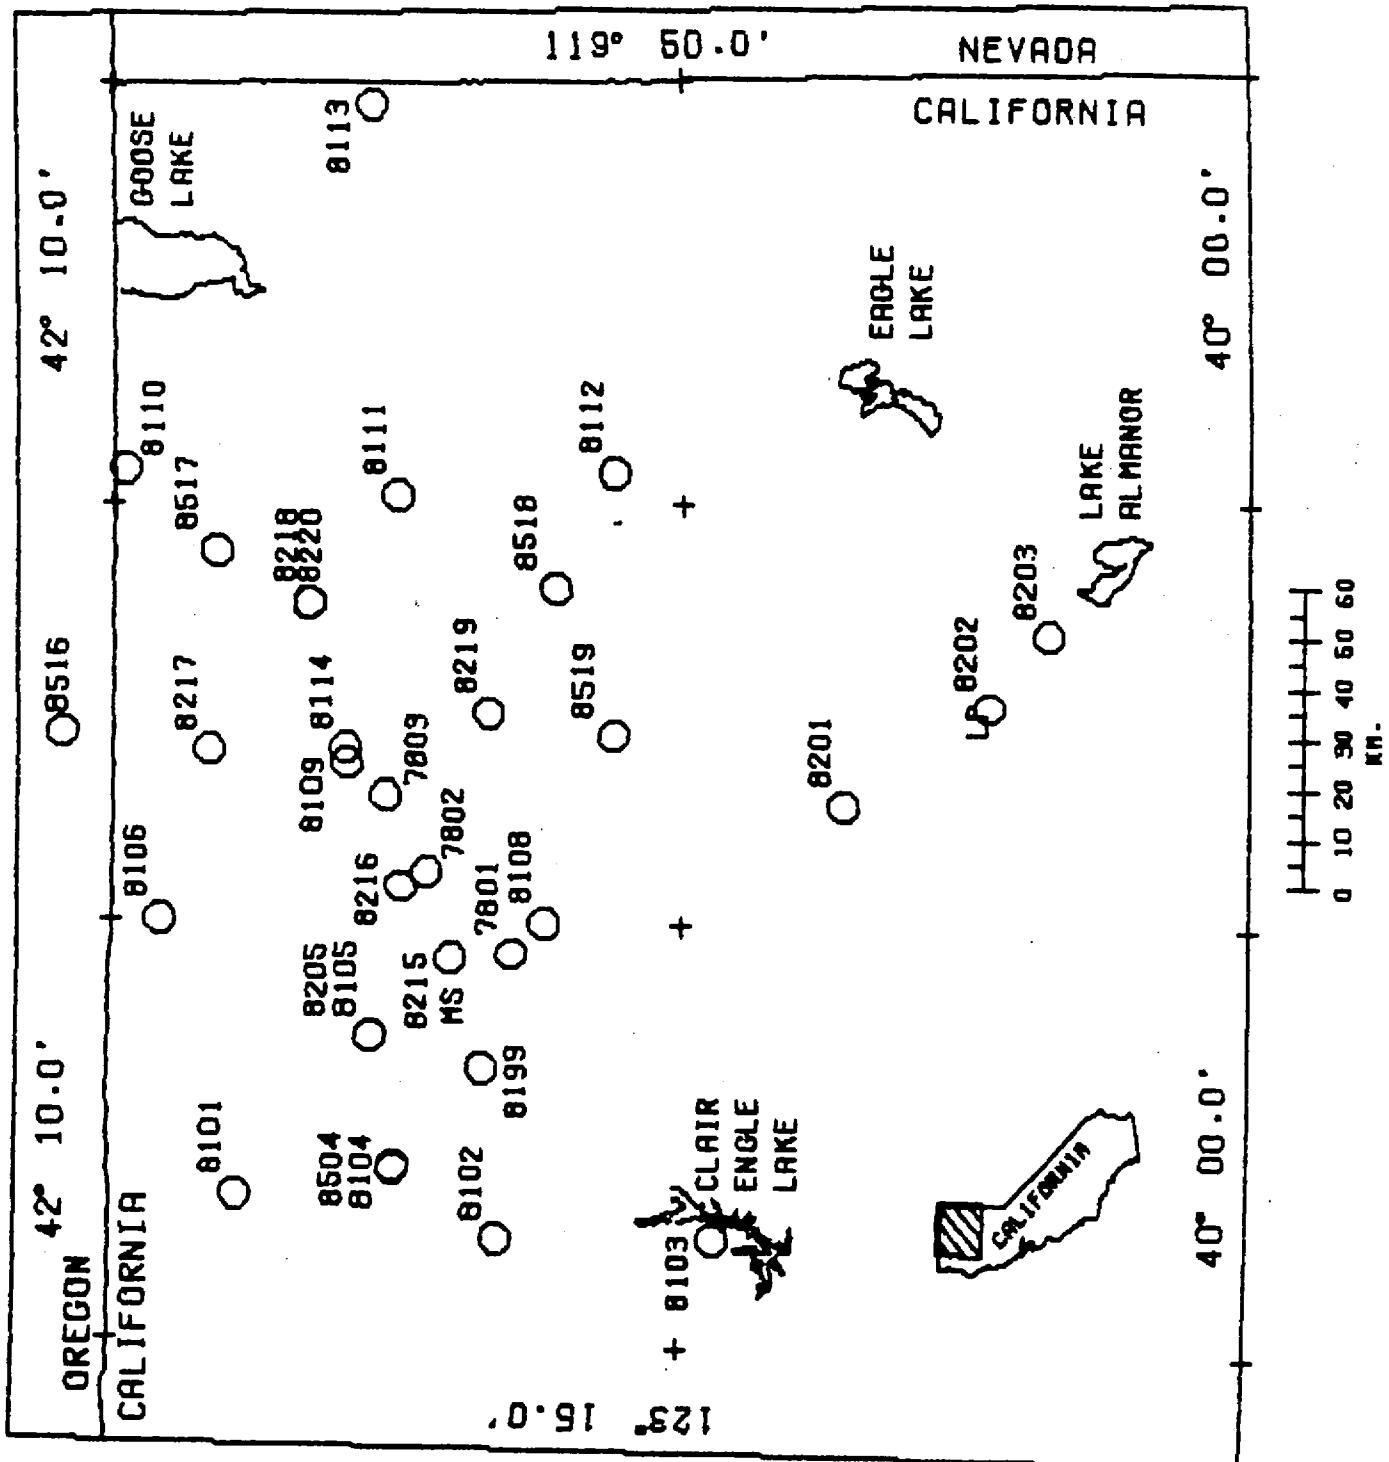

Figure 1. Locations of shotpoints (circles) for all surveys. First two digits of shotpoint label refer to year the shotpoint was first used. Shotpoint pairs 8105-8205, 8218-8220, and 8104-8504 are nearly coincident, differing in location by only a few meters. The location of Mount Shasta is marked MS; Lassen Peak is marked LP. Portions of Goose Lake within Oregon are not shown.

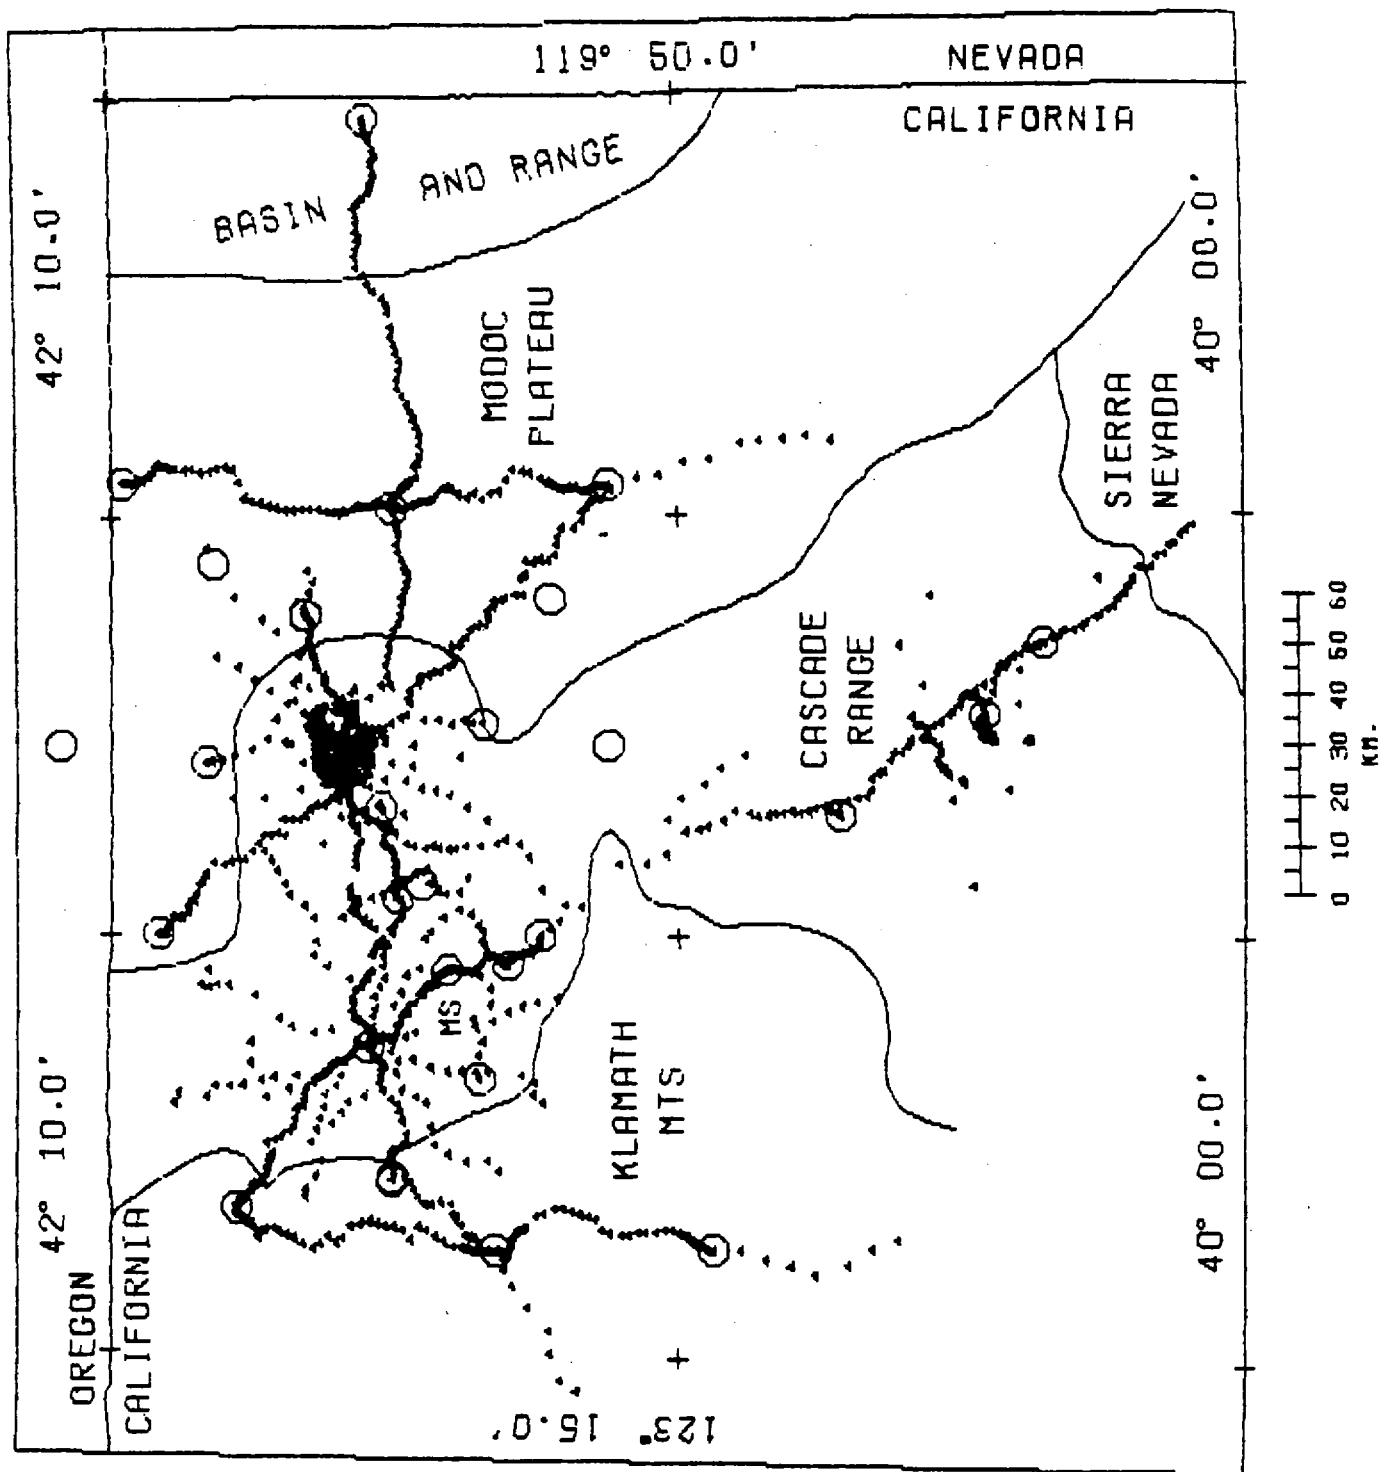

Figure 2. Locations of all deployed seismic recorders (triangles) superimposed on map of figure 1. Five geologic provinces covered by survey are Klamath Mountains, Cascade Range, Modoc Plateau, Basin and Range, and Sierra Nevada provinces.

TABLE 3
SHOT-STATION DISTANCES AND AZIMUTHS,
AND THE RECORDER ATTENUATION SETTINGS

Definition of table entries:

Loc	- Station location number.																																
Dist	- Distance in kilometers between the shotpoint and station.																																
Azim	- Azimuth from the shotpoint to the recording station.																																
Db	- Recorder attenuation setting in decibels. Gain of station at zero db is approximately 104 db peaked at about 20 hz (see Berge and others, 1986).																																
Tape Grade	<p>- Tape grade code indicating any malfunction of the seismograph or data playback equipment.</p> <table border="0"> <tr><td>0 - Good playback</td><td>14 - Off frequency, tape speed off</td></tr> <tr><td>1 - Tape did not run</td><td>15 - Calibration problems</td></tr> <tr><td>2 - Tape ran but no signal</td><td>16 - Recorder stopped during record</td></tr> <tr><td>3 - Skipped record time</td><td>17 - Bad time code</td></tr> <tr><td>4 - Fast forward; no signal</td><td>18 - Tape speed way off; belt slipped</td></tr> <tr><td>5 - Rewound and erased</td><td>19 - Turned on too early</td></tr> <tr><td>6 - Weak multiplexed signal; cannot read time code; low record level</td><td>20 - In for repair; not deployed</td></tr> <tr><td>7 - Continuous calibration</td><td>21 - Geophone disconnected or shorted</td></tr> <tr><td>8 - Noise, sinusoidal</td><td>22 - Wrong unit number</td></tr> <tr><td>9 - Noise, spike</td><td>23 - Wrong gain settings</td></tr> <tr><td>10 - Noise, WWVB cross feed</td><td>24 - Late start</td></tr> <tr><td>11 - Noise, periodic ticks</td><td>25 - Bad geophone test</td></tr> <tr><td>12 - Noise, random</td><td>26 - One or more channels missing</td></tr> <tr><td>13 - Bad clock</td><td>27 - Bad WWVB radio signal</td></tr> <tr><td></td><td>28 - Unit damaged / vandalized</td></tr> <tr><td></td><td>29 - Tape damaged / vandalized</td></tr> </table>	0 - Good playback	14 - Off frequency, tape speed off	1 - Tape did not run	15 - Calibration problems	2 - Tape ran but no signal	16 - Recorder stopped during record	3 - Skipped record time	17 - Bad time code	4 - Fast forward; no signal	18 - Tape speed way off; belt slipped	5 - Rewound and erased	19 - Turned on too early	6 - Weak multiplexed signal; cannot read time code; low record level	20 - In for repair; not deployed	7 - Continuous calibration	21 - Geophone disconnected or shorted	8 - Noise, sinusoidal	22 - Wrong unit number	9 - Noise, spike	23 - Wrong gain settings	10 - Noise, WWVB cross feed	24 - Late start	11 - Noise, periodic ticks	25 - Bad geophone test	12 - Noise, random	26 - One or more channels missing	13 - Bad clock	27 - Bad WWVB radio signal		28 - Unit damaged / vandalized		29 - Tape damaged / vandalized
0 - Good playback	14 - Off frequency, tape speed off																																
1 - Tape did not run	15 - Calibration problems																																
2 - Tape ran but no signal	16 - Recorder stopped during record																																
3 - Skipped record time	17 - Bad time code																																
4 - Fast forward; no signal	18 - Tape speed way off; belt slipped																																
5 - Rewound and erased	19 - Turned on too early																																
6 - Weak multiplexed signal; cannot read time code; low record level	20 - In for repair; not deployed																																
7 - Continuous calibration	21 - Geophone disconnected or shorted																																
8 - Noise, sinusoidal	22 - Wrong unit number																																
9 - Noise, spike	23 - Wrong gain settings																																
10 - Noise, WWVB cross feed	24 - Late start																																
11 - Noise, periodic ticks	25 - Bad geophone test																																
12 - Noise, random	26 - One or more channels missing																																
13 - Bad clock	27 - Bad WWVB radio signal																																
	28 - Unit damaged / vandalized																																
	29 - Tape damaged / vandalized																																
Unit	- Recording instrument unit number for shot number 8101 only (the "Huddle test").

C 1
C 2
C 3 DATA TAPE FOR THE 1978-1985 SEISMIC-REFRACTION
C 4 SURVEYS IN NORTHEASTERN CALIFORNIA
C 5
C 6 This tape is part of a three reel set containing seismic-refraction data
C 7 collected by the U.S. Geological Survey. Reel 1 contains the 1978 and
C 8 1981 waveform data written in SEGY format. Reel 2 contains the 1982 and
C 9 1985 waveform data written in SEGY format. Reel 3 contains tables 1-7
C10 from Kohler and others, 1987, in unlabelled ASCII format. For further
C11 information, see the accompanying report:
C12
C13 Kohler, W.M., G.S. Fuis, and P.A. Berge, 1987, Data Report for the
C14 1978-1985 Seismic-Refraction Surveys in Northeastern California:

TABLE 6
SEGY TAPE REEL IDENTIFICATION HEADER.
PART 2, THE BINARY CODED BLOCK.

Byte Numbers	Values this data set	Description
3217 -3218	5000	Sampling interval in microseconds
3221 -3222	4001	Maximum number of samples per data trace
3225 -3226	1	Data sample format code: Floating point (4 bytes)
3255 -3256	1	Measurement system: Meters

TABLE 7
SEGY TAPE TRACE IDENTIFICATION HEADER WRITTEN IN BINARY CODE

Byte Numbers	Values this data set	Description
1 - 4	1-N	Trace sequence number within reel--each reel starts with trace number one. Values vary from 1 to the number of traces on the tape.
5 - 8	1-N	Same as bytes 1 - 4.
9 - 12	varies	Station location number.
29 - 30	1	Trace identification code: Seismic data
37 - 40	varies	Shotpoint-to-recorder distance (m).
41 - 44	varies	Surface elevation at recorder (m); all elevations above sea level are positive and below sea level are negative.
45 - 48	varies	Surface elevation at shotpoint (m).
49 - 52	varies	Source depth below surface, a positive number (m).
69 - 70	1	Scalar to be applied to all elevations.
71 - 72	-100	Scalar to be applied to all coordinates.
73 - 76	varies	Shotpoint coordinate - X.
77 - 80	varies	Shotpoint coordinate - Y.
81 - 84	varies	Recorder coordinate - X.
85 - 88	varies	Recorder coordinate - Y.
89 - 90	2	Coordinate units: Seconds of arc.
115 - 116	2001 or 4001	Number of samples in this trace. 1978, 1981, and 1982 traces are 2001 samples long. 1985 traces are 4001 samples long.
117 - 118	5000	Sample interval in microseconds for this trace.
121 - 122	varies	Recorder attenuation in db for this trace. Trace amplitudes have not been adjusted for instrument gain, but the gain correction factor can be estimated from the instrument attenuation value (see Berge and others, 1986).
157 - 158	varies	Shot detonation time - Year.
159 - 160	varies	Shot detonation time - Day.
161 - 162	varies	Shot detonation time - Hour (24 hour clock).
163 - 164	varies	Shot detonation time - Minute.
165 - 166	varies	Shot detonation time - Second.
167 - 168	2	Time basis code: GMT
181 - 182	varies	Shot detonation time - Milliseconds.
183 - 184	varies	Shotpoint location number.
185 - 186	varies	Recorder unit number.
191 - 192	varies	Distance weighting exponent (hundredths).
193 - 194	varies	Shot sequence number (shot number).
195 - 196	varies	Weight of explosives detonated (kg).
197 - 200	varies	Shotpoint-to-station azimuth (seconds of arc).
201 - 204	varies	Digital trace delay time (milliseconds). The time of the first data sample is found by adding the trace delay time to the shot detonation time.
