

Notes on Project 17-028 – Sinoprobe

The 2011 active source data that are archived at the DMC for this project were processed into a PH5 Data Set by the Data Group at IRIS PASSCAL in 2017 and might be incomplete. Based on the available metadata, there may be missing source information for the lines used later in the study. The experiment used 500 Reftek RT125A (Texan) dataloggers. All questions regarding the experiment should be directed to the Principal Investigator on the project, Dr. Randy Keller, at the University of Oklahoma (grkeller@ou.edu).
