The Bogotá Challenge

If you
-- work with the IRIS DMC to get the first 6 months of continuous data from 2014 (or more!) from one or more broadband stations from your network to the DMC
we will
-- quality control those data using MUSTANG and work with you to resolve problems (IRIS)
-- check the seismometer scaling and orientation using synthetic seismograms (Ekström)
and
-- prepare a manuscript with all contributors as co-authors for publication, describing the progress achieved from the Bogotá workshop

deadline: January 1, 2015
