

**Status of the GT Network station BDFB**

Posted April 29, 2015

This station is still operating, but not made available to the open seismological community through IRIS since 2002,237.

This station was taken over by host nation Brazil for IMS purposes after the USGS closed support for this site, and has been restricted since that time. It is being used by the NEIC for monitoring purposes, and therefore would appear in ISC and NEIC catalogs, but waveform/timeseries data are not shared.
